Project management tool

For the project management tool, we used [Jira](#). The stakeholder has access to this board.

CI/CD pipelines and repository links

Github Organization

- To have a better overview of all projects, follow the link to the github organization: <https://github.com/S-A-RB05>

Platform (frontend)

- Log in functionality (creating account or google login)
- Added a screen which can import EA's and then run a test.
- <https://github.com/S-A-RB05/platform>

Strategy service

- Initialized repository
- Added EA storing functionality
- <https://github.com/S-A-RB05/StratService>

Test Manager service

- Initialized repository
- Can run tests by starting a docker container containing MetaTrader
- <https://github.com/S-A-RB05/TestManager>

Docker image pipelines

- When pushing to the main branch of the repo, a docker image gets built and is put onto docker hub, making it easily accessible for the stakeholder. This is made for the Platform, StratService and TestManager Service.
- <https://github.com/S-A-RB05/StratService/actions/workflows/docker-image.yml>
- <https://github.com/S-A-RB05/TestManager/actions/workflows/docker-image.yml>
- <https://github.com/S-A-RB05/platform/blob/main/.github/workflows/docker-image.yml>

Go build and test pipelines

- The pipeline tries to build the project when pushing, making sure the build doesn't have any build errors. It then runs any tests that the service has.
- <https://github.com/S-A-RB05/StratService/actions/workflows/go.yml>
- <https://github.com/S-A-RB05/TestManager/actions/workflows/go.yml>

With these pipelines in place, assuming the code is covered by tests, we can automate the process of checking functionality, avoiding build errors and the deployment of the application.

Sprint achievements

For this sprint, the goal was to make the project ready to hand over to the stakeholder. This included the following things:

- Documentation for each service
- Setup guides for the project
- Improved code readability
- Improved logging capabilities
- Deployment documentation
- Handover Github organization (repositories)
- Handover research

Sprint retrospective

Keep doing:

- Teamwork
- Distribution of tasks
- Processed feedback
- Kept up with the backlog
- Agile mindset
- Made great progress despite little knowledge about trading

Should Improve:

- Make smaller user stories
- Tweak sprint velocity
- Start with documentation sooner
